Ideation Phase

Incident Life Cycle Automation in ServiceNow

Student Name	Mudadla Mohan
Project	Incident Life Cycle Automation in ServiceNow
Phase Focus	Identify the problem, understand the users affected by incident handling, and define the high-level project idea and goals.

Project Overview

This document presents the selected project phase in a structured and professional format. The content is prepared from the project evidence supplied in the SkillWallet scan, with the original project screenshots arranged as visual evidence.

Phase Objective

Identify the problem, understand the users affected by incident handling, and define the high-level project idea and goals.

Problem Identification

The project focuses on automating and standardizing the Incident Management lifecycle in ServiceNow. The supplied project description highlights the need to make incident creation, classification, resolution, escalation and tracking more structured.

- Reduce manual effort in incident handling.
- Provide faster and more consistent incident resolution.
- Improve service visibility and SLA compliance.
- Connect incident work with knowledge and change-management activities.

Proposed Solution

The proposed solution is an Incident Life Cycle Automation solution in ServiceNow. It brings incident records, classification, knowledge assistance, reassignment, change requests, child incidents, resolution and validation into one managed workflow.

- Create and classify incidents in the Service Operations Workspace.
- Use Agent Assist and Knowledge Management for faster troubleshooting.
- Route incidents to appropriate support groups.
- Support Level 2 investigation and escalation.
- Create emergency changes and child incidents when required.

Initial Scope and Stakeholders

The project evidence identifies end users, Service Desk Agents, Level 2 Support teams, Change Management and the ServiceNow Administrator as important stakeholders.

- End Users – report issues and expect quick resolution.
- Service Desk Agents – log, classify and manage incidents.
- Level 2 Support – diagnose and resolve complex incidents.
- Change Management – handle emergency changes.
- ServiceNow Admin – maintain the platform configuration.

Project Evidence / Screenshots

The following screenshots are taken from the supplied 35-page project scan and are placed neatly as evidence for this phase.

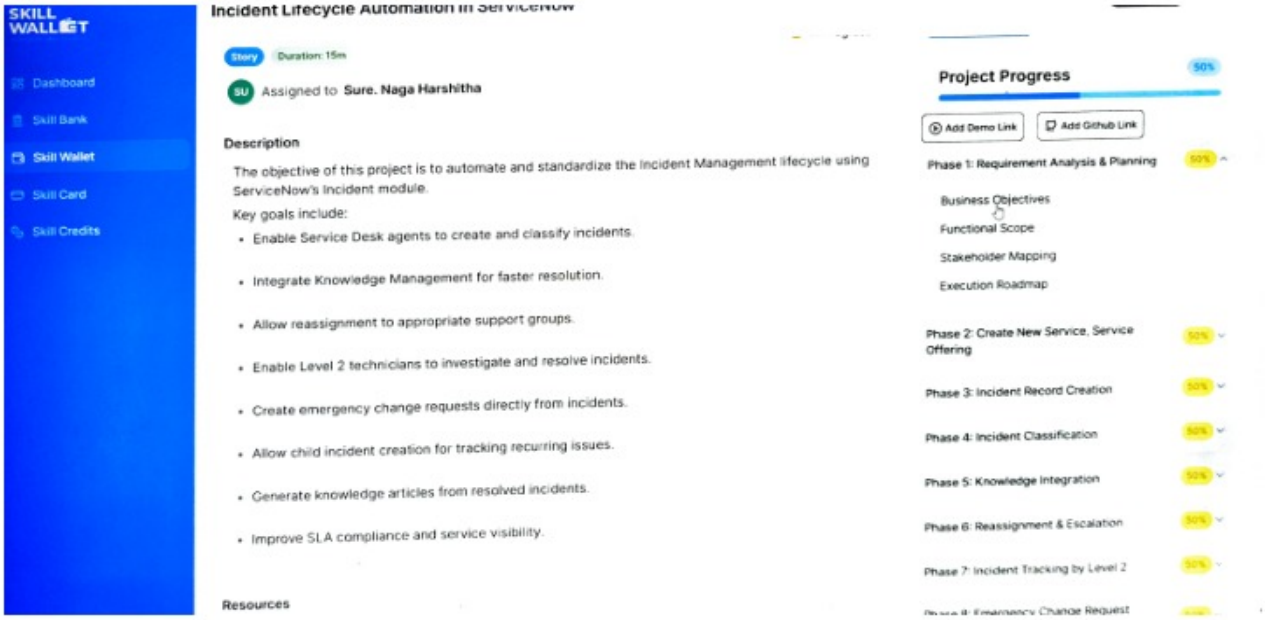

Figure 2: Project overview showing the project objective and major incident-management goals.

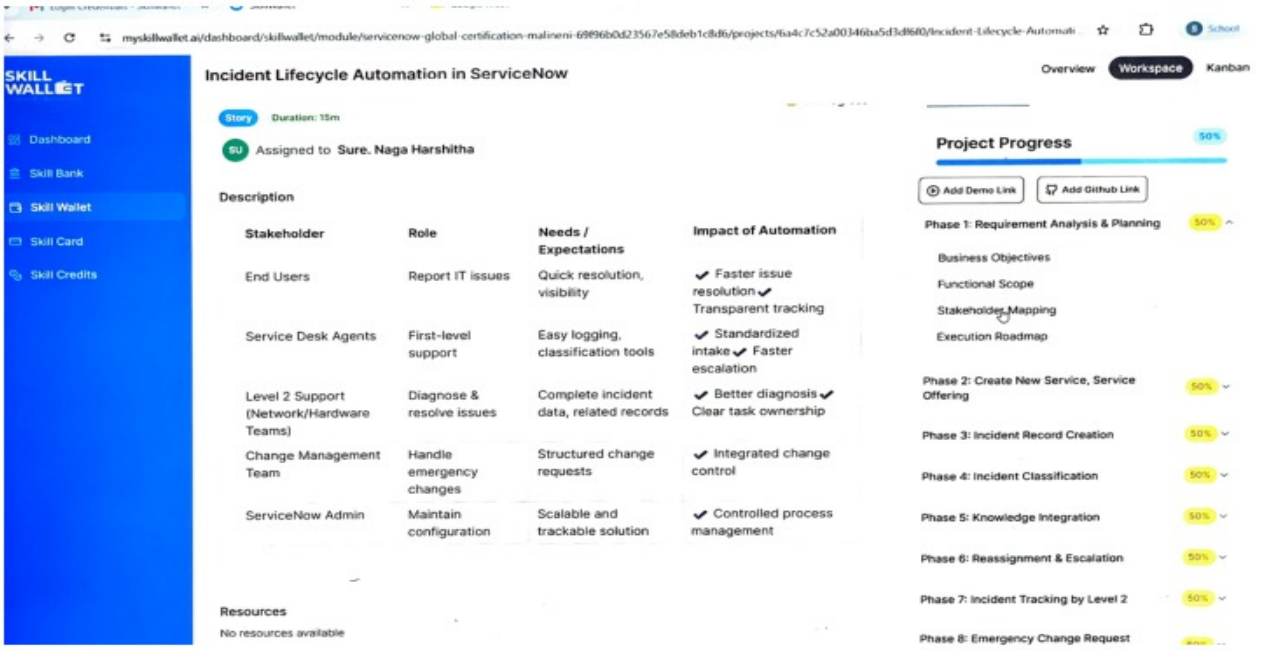

Figure 4: Stakeholder mapping showing roles, expectations and the impact of automation.

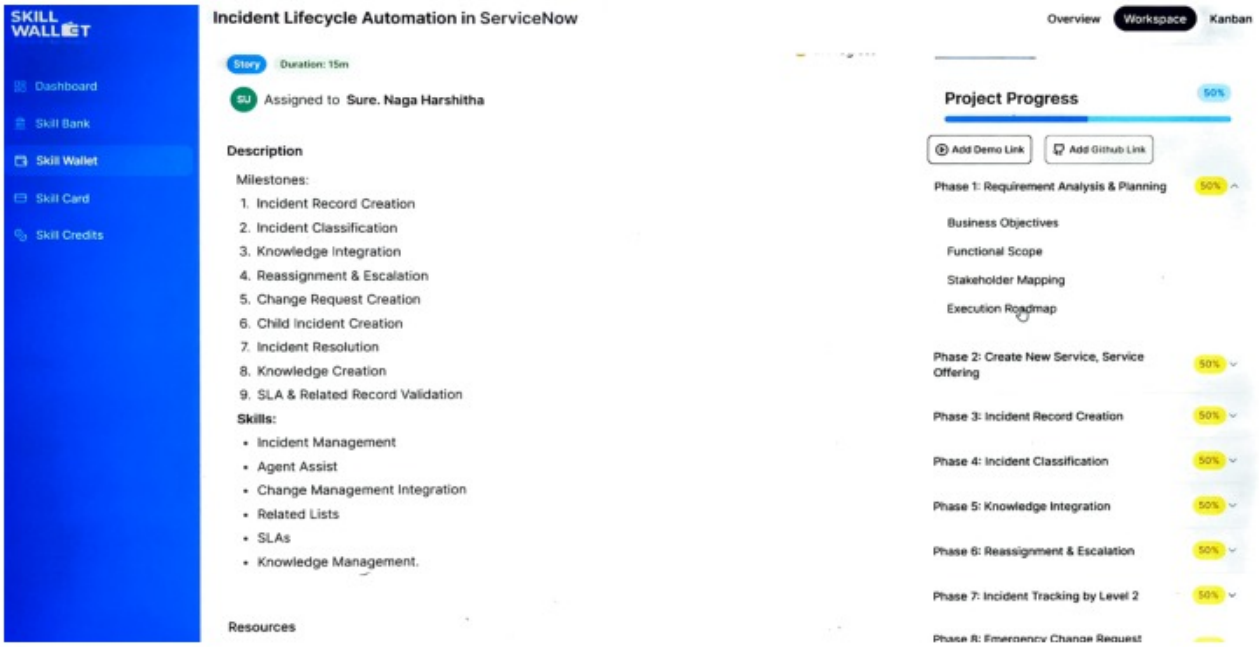

Figure 5: Project milestones and skills identified in the supplied project.
