Requirement Analysis Phase

Incident Life Cycle Automation in ServiceNow

Student Name	Mudadla Mohan
Project	Incident Life Cycle Automation in ServiceNow
Phase Focus	Translate the project idea into clear business objectives, functional scope, stakeholder expectations and measurable requirements.

Project Overview

This document presents the selected project phase in a structured and professional format. The content is prepared from the project evidence supplied in the SkillWallet scan, with the original project screenshots arranged as visual evidence.

Phase Objective

Translate the project idea into clear business objectives, functional scope, stakeholder expectations and measurable requirements.

Business Requirements

The supplied project description states that the solution should automate and standardize the Incident Management lifecycle. The requirements are centered on quicker resolution, structured tracking, better service visibility and controlled escalation.

- Incident records must be created and tracked.
- Incidents must be classified using category, subcategory, urgency, service and configuration item.
- Knowledge articles should be available during incident handling.
- Incidents should be reassigned to appropriate support teams.
- Emergency change requests should be connected to incidents.
- Child incidents should support recurring or related issues.
- Resolution details, SLA information and related records should remain traceable.

Stakeholder Requirements

Stakeholders have different expectations from the automated lifecycle. The supplied stakeholder table connects each stakeholder with the expected improvement from automation.

- End users need quick resolution and transparent tracking.
- Service Desk Agents need easy logging and standardized classification.
- Level 2 teams need complete incident data and clear task ownership.
- Change Management needs integrated change control.
- Administrators need a scalable and traceable configuration.

Functional Scope

The functional scope shown in the project includes Incident Record Creation, Incident Classification, Agent Assist Knowledge Integration, reassignment to Level 2 teams, Emergency Change Request Creation, Child Incident Creation, cause and resolution documentation, knowledge article creation, and SLA/related-record tracking.

- Define incident fields and classification values.
- Support knowledge lookup from the incident.
- Track assignment, watch lists and related records.
- Record cause and resolution before closure.
- Validate the complete incident lifecycle.

Project Evidence / Screenshots

The following screenshots are taken from the supplied 35-page project scan and are placed neatly as evidence for this phase.

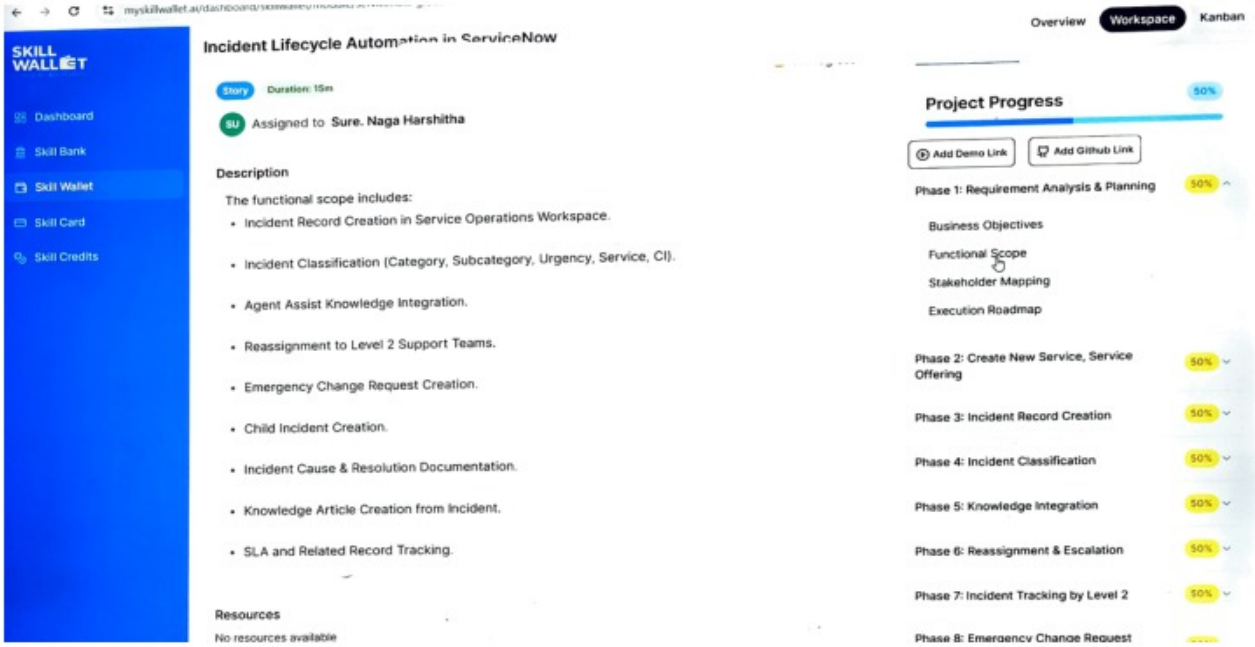

Figure 3: Functional scope listed in the project evidence.

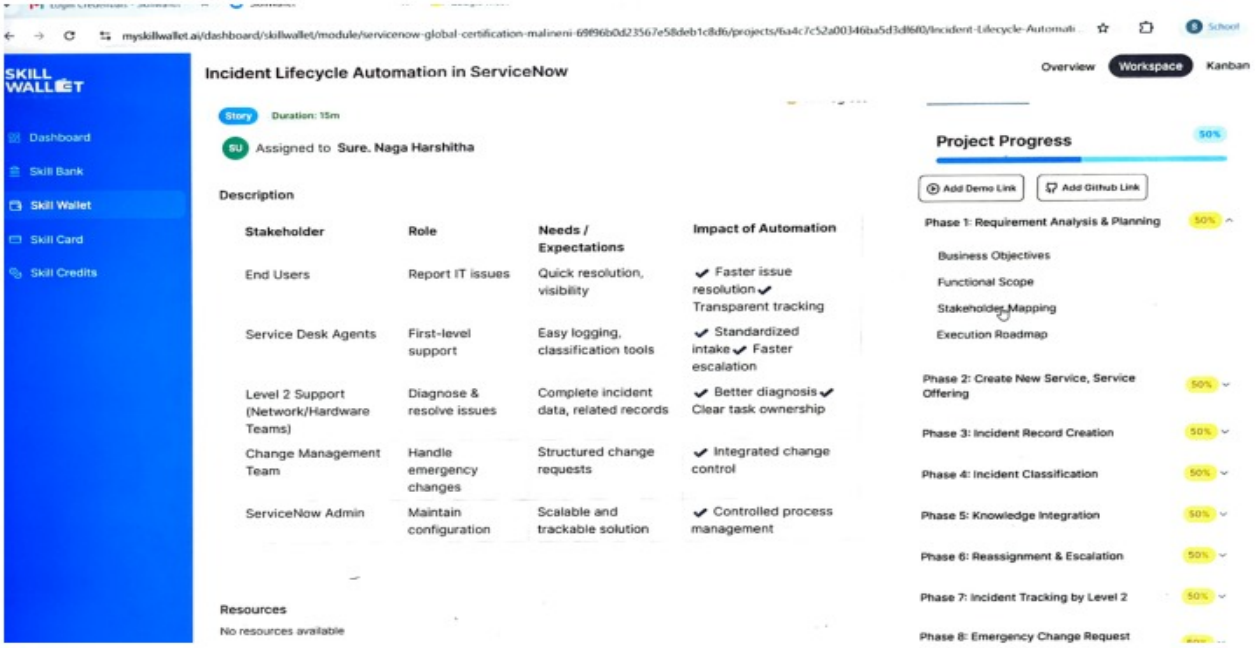

Figure 4: Stakeholder mapping used to understand expectations and automation impact.

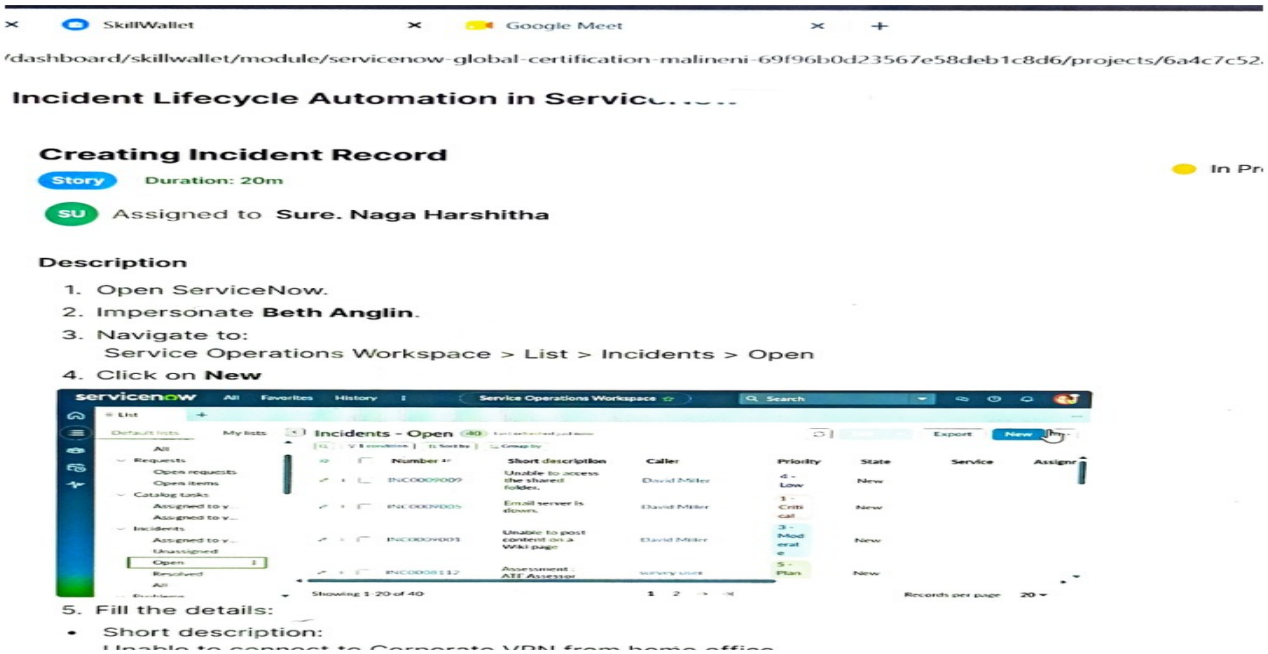

Figure 9: Incident record creation workflow and required incident details.
