Project Documentation Phase

Incident Life Cycle Automation in ServiceNow

Student Name	Mudadla Mohan
Project	Incident Life Cycle Automation in ServiceNow
Phase Focus	Document the implemented lifecycle, evidence, validation results and final outcome so the project can be reviewed and maintained.

Project Overview

This document presents the selected project phase in a structured and professional format. The content is prepared from the project evidence supplied in the SkillWallet scan, with the original project screenshots arranged as visual evidence.

Phase Objective

Document the implemented lifecycle, evidence, validation results and final outcome so the project can be reviewed and maintained.

Technical Documentation

The project documentation should capture the complete incident lifecycle and the important configuration steps demonstrated in the supplied scan.

- Service and Service Offering creation.
- Incident creation and classification.
- Knowledge integration and knowledge article creation.
- Reassignment, watch-list updates and Level 2 investigation.
- Emergency change and child incident handling.
- Cause, resolution and final validation.

Testing and Validation Documentation

The supplied project includes a dedicated Testing & Deployment Validation activity. Its validation points include end-to-end incident lifecycle, escalation, change integration, knowledge creation, child incident management, SLA tracking and multi-team collaboration.

- Verify the parent incident reaches Resolved.
- Verify the child incident reaches Resolved where applicable.
- Confirm activity shows resolution triggered by the parent.
- Confirm the change request is linked.
- Confirm knowledge is created.
- Confirm SLA tracking is visible.

Final Project Outcome

The project conclusion states that Incident Lifecycle Automation in ServiceNow automates the incident management process and improves efficiency, accuracy and response time. It also emphasizes better incident resolution, ITIL-aligned process compliance and improved user satisfaction.

- Centralized incident lifecycle management.
- Faster and more structured resolution.
- Better integration between Incident, Change and Knowledge.
- Improved SLA adherence and service visibility.
- Clearer documentation for future maintenance and review.

Project Evidence / Screenshots

The following screenshots are taken from the supplied 35-page project scan and are placed neatly as evidence for this phase.

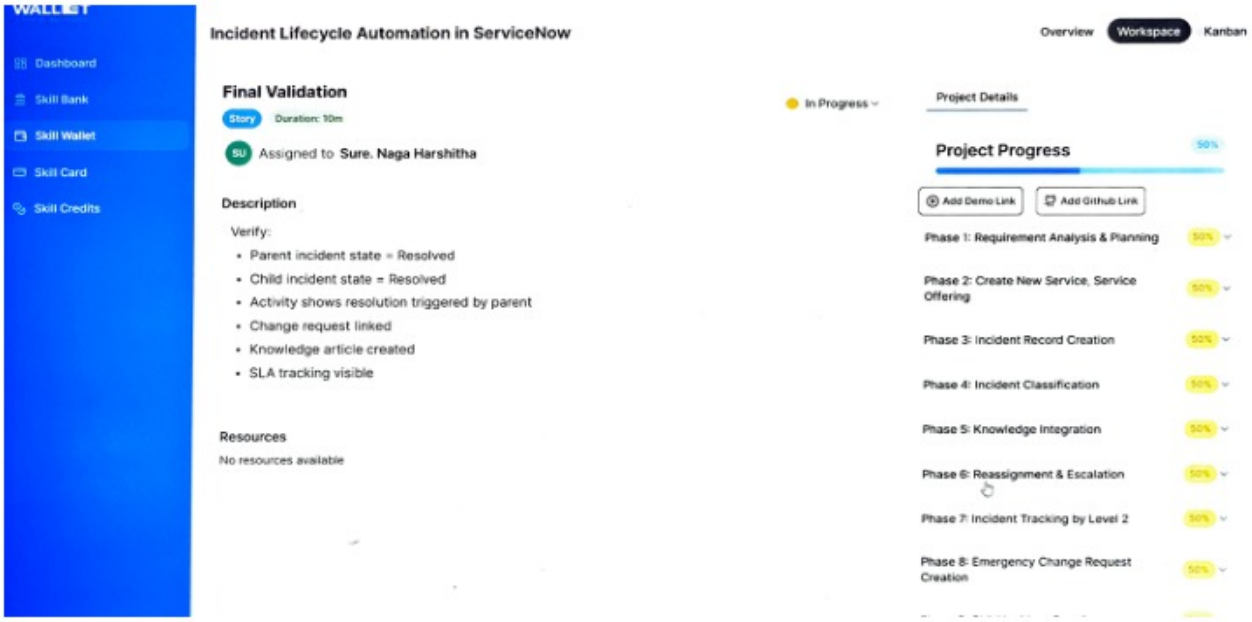

Figure 28: Final validation checks for parent/child state, change, knowledge and SLA tracking.

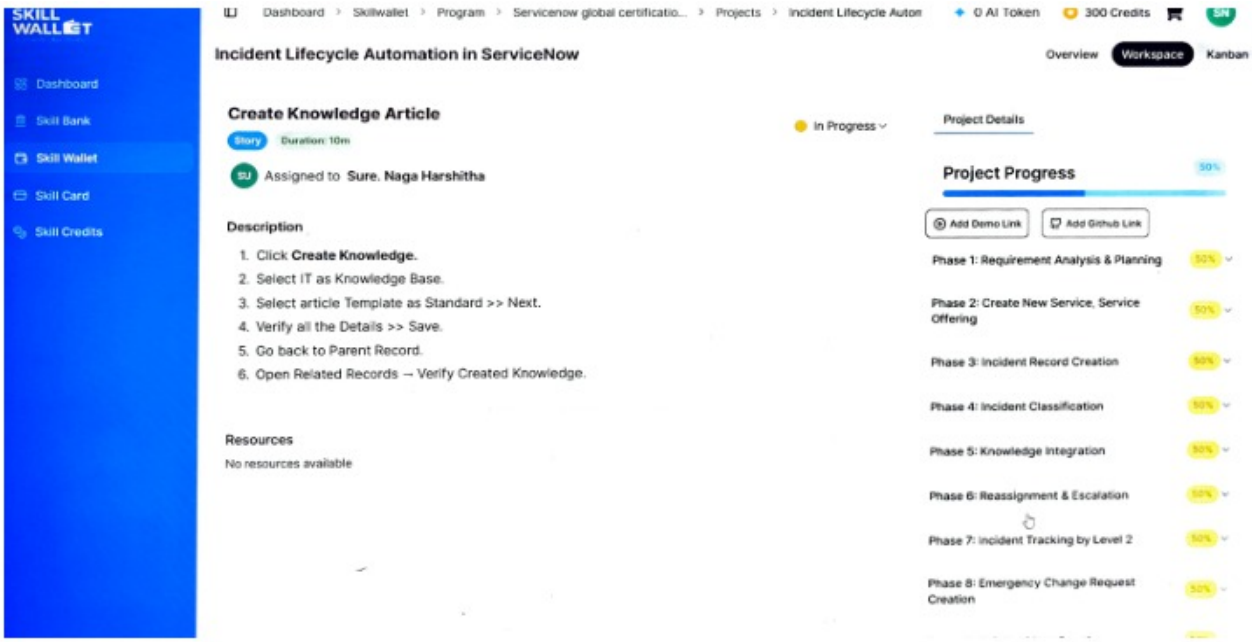

Figure 30: Knowledge article creation activity.

Figure 32: Project conclusion and overall outcome.

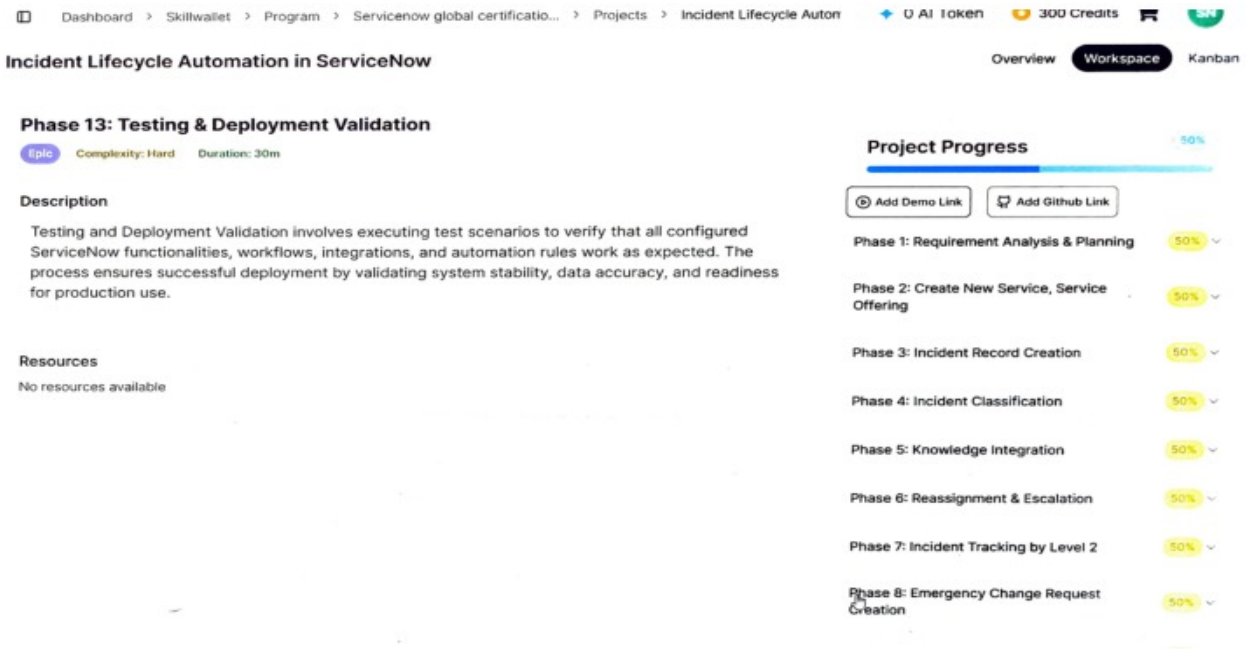

Figure 35: Testing and deployment validation summary.
